TSRC workshops are intended to extend the frontiers in molecular science by providing a uniquely inspiring, relaxed environment for face-to-face discussion and collaboration among scientists, engineers, theorists, and experimentalists from around the world. To meet this goal, TSRC provides the common ground for addressing critical scientific challenges, focusing new questions, and catalyzing the discovery of answers.

The workshop organizers fully support TSRC in its mission and ask that all participants focus on emphasizing new results and directions for their research programs, rather than simply presenting a ‘canned’ seminar. The forum of TSRC talks is intended to promote ‘real-time’ discussion of research results, motivations and strategies. Consequently, we ask that all participants plan to present no more than 40-45 minutes of material in anticipation of questions and comments filling the balance of each 1 hour slot.
